Introduction

Vendor Center is Jumia's new portal that will allow Jumia's sellers to manage all their shops in one stop, with one unique login.

GPM API was designed to allow sellers that manage their operations using ERPs / APIs to integrate with Vendor Center via API to manage their catalog on an end to end

- Create new products;
- Update the content of their products;
- Manage stock, price and status of their products;

For example, a typical call sequence of product creation includes:

1. Get Shops, Get Brands, Get Categories, Get Attributes - preparation of available basic data

Glossary

Concept of **Feed**:

Feed is an aggregation of work which is parsed and processed individually, being it:

- A set of products which will be created asynchronously;
- A set of price/stock/status updates which will be processed asynchronously;

Note:

If you find that some of your shops are not assigned to your mastershop in Vendor Center, please contact your account manager.

2. Products Create Feed - returns the feed id
3. Feed Details - use the feed id to check if the feed is completed
4. Get Products - use the seller sku to check the product sid and the QC status

API Documentation

This section describes public vendor **APIs** functionality, and the available actions.

Base URIs

The Base URIs of our Authorization Server and Resource Server.

<https://vendor-api.jumia.com>

General HTTP Responses

Those responses apply to the entire API, for specific responses check each endpoint section.

Code	Response	Description
400	BAD REQUEST	There was a problem with the request payload. Either a field is missing or a field type is not compliant with the contract.
401	UNAUTHORIZED	The client could not be correctly authenticated.
403	FORBIDDEN	The client is authenticated but does not have permission to the endpoint.
404	NOT FOUND	The URL or resource doesn't exist.
405	METHOD NOT ALLOWED	The requested HTTP method is not allowed for the endpoint.
500	INTERNAL SERVER ERROR	An unexpected internal error has occurred in the server.
501	NOT IMPLEMENTED	The Global Order Feature is not enabled.

GET - Get Shops - "/shops"

Get all available shops under the authenticated User's Shop.

Paginated: No.

Request

      ]
    }
  ]
}
```

GET - Get Shops of MasterShop - "/shops-of-master-shop"

Get all shops under the authenticated User and if this shops has master shops associate master shop shops

Authentication: Web or Self Authorization Application managed on VC-UI

ACL Authorization: No need. Every authenticated user should be able to list its Master Shop's Shops.

Paginated: No need since the list of Shops is usually less than 100 records.

Rules:

- Return user shops and Master Shop shops.

Loose ends:

Comments:

- Follow the same API URL pattern than VCS with **/api/vendors**. For instance, get Orders: /api/vendor/orders

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Default Values	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id		NO	

Success Response

HTTP Status Codes

}
```

How to retrieve the necessary data for Product Creation?

- **Brands:**
 - To retrieve the brand **code**, use the Get Brands Api;
- **Categories:**
 - To retrieve the category **code**, use the Get Categories Api;
- **Attributes & Attribute Options:**
 - To retrieve the attributes of an Attribute Set, first use the Get Categories and retrieve the attribute set **sid**;
 - Then use the attribute set **sid** on the Get Attributes, you will get the **names** for attributes and attribute options;

GET - Get Brands - "/catalog/brands"

Get all active Brands in at least one Business Client from Catalog.

Paginated: Yes.

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Default Values	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id		NO	

Request Parameters

Parameter Name	Parameter Type	Required	Accepted Values / Format	Default Values	Multi Values	Comments
page	Number	NO	Page Number, otherwise the first page be returned.	1	NO	

Success Response

HTTP Status Codes

Code	Response	Description
200	OK	The request was successful.

Success Response - Payload Content

Attribute	Attribute Type	Required	Comments
brands	Array	YES	List of brands
brands.code	Number	YES	Brand Id.
brands.name	String	YES	Brand Global Name. Without translations.
page.current	Number	YES	Current requested page, Otherwise the first page (1).
page.totalOfPages	Number	YES	Total of pages available, given the total of Records divide by page size (Default 50)

Success Response - Payload Example

Payload - example

```
{
  "brands": [
    {
      "code": 1127718,
      "name": "Samsung"
    },
    {
      "code": 1128070,
      "name": "AIC APPLICATION"
    }
  ],
  "page": {
    "current": 1,
    "totalOfPages": 3100
  }
}
```

GET - Get Categories - "/catalog/categories"

Get all active Categories in at least one Business Client from PIM Catalog.

Paginated: Yes.

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Default Values	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id		NO	

Request Parameters

Parameter Name	Parameter Type	Required	Accepted Values / Format	Default Values	Multi Values	Comments
page	Number	NO	Page Number, otherwise the first page be returned.	1	NO	
attributeSetName	String	NO	Attribute Set name to filter the categories		NO	

Success Response

HTTP Status Codes

Code	Response	Description
200	OK	The request was successful.

Success Response - Payload Content

Attribute	Attribute Type	Required	Comments
-----------	----------------	----------	----------

categories	Array	YES	List of Categories.
categories.code	Number	YES	Category Id.
categories.name	String	YES	Category Name.
categories.completePath	String	YES	The all parent Categories Names separated by "/".
categories.attributeSet	Object	YES	
categories.attributeSet.id	UUID	YES	Id of the Attribute Set.
categories.attributeSet.name	String	YES	Attribute Set Name.

Success Response - Payload Example

Payload - example
<pre>{ "categories": [{ "code": 1000052, "name": "Foreign Language Study", "completePath": "Books, Movies and Music / Art & Humanities / Foreign Language Study", "attributeSet": { "id": "9b66c50c-562a-4a98-9eae-0cf133a50f9d", "name": "Books & Magazines" } }, { "code": 1020202, "name": "Tire & Wheel Tools", "completePath": "Automobile / Tools & Equipment / Tire & Wheel Tools", "attributeSet": { "id": "ba808961-18be-4b5b-bf10-076f398f2ed2", "name": "Vehicle & Parts" } }] }</pre>

GET - Get Attributes - "/catalog/attribute-sets/{id}"

Get all active Attributes in a Given Attribute Set.

Paginated: No, returns all attributes for the given attribute set.

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Default Values	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id		NO	

Path Parameters

Path Parameter Name	Parameter Type	Required	Accepted Values / Format	Default Values	Multi Values	Comments
id	UUID	YES	Attribute Set Id of the desired list of Attributes.		NO	

Success Response

HTTP Status Codes

Code	Response	Description
200	OK	The request was successful.

Success Response - Payload Content

variation.

Attribute	Attribute Type	Required	Comments
attributes	Array	YES	List of Attributes.

POST - Products Update Stock Feed - "/feeds/products/stock"

Request a new Feed of Products stock update.

Limit of Records: We should start with a limit of 1000 records because of the payload Size.

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id	NO	

Request - Payload

Attribute	Attribute Type	Required	Comments
products	Array	YES	List of Products to have the stock updated.
products.sellerSku	String	YES	Seller SKU.
products.id	UUID	YES	Product SID.
products.stock	Number	YES	Stock of the product.

Request - Payload Example

Payload - example

```
{
  "products": [
    {
      "sellerSku": "8682447314708",
      "id": "07c390ae-d58a-42a2-8ec6-5051bca18cab",
      "stock": 100
    },
    {
      "sellerSku": "8682447314709",
      "id": "07c390ae-d58a-42a2-8ec6-5051bca19cab",
      "stock": 50
    }
  ]
}
```

Success Response

HTTP Status Codes

Code	Response	Description
200	OK	The feed was successfully created

Success Response - Payload Content

Attribute	Attribute Type	Required	Comments
feedId	UUID	YES	The Feed Id.

Success response - Payload Example

Payload - example

```
{
  "feedId": "07c390ae-d58a-42a2-8ec6-5051bca19cab"
}
```

POST - Products Update Price Feed - "/feeds/products/price"

Request a new Feed of Products price update.

Limit of Records: We should start with a limit of 1000 records because of the payload Size.

Reset Global Sale Price: Reset/clean of the global sale price, can be achieved by this endpoint, to achieve that, **products.price.salePrice.value**, **products.price.salePrice.startAt** and **products.price.salePrice.endAt** must be null (example of the request payload further).

NOTE: Global price overrides local prices if local prices are not present on payload.

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id	NO	

Request - Payload

Attribute	Attribute Type	Required	Comments
products	Array	YES	List of Products to have the price updated.
products.id	UUID	YES	Product SID.
products.sellerSku	String	YES	Seller SKU.
products.category	Number	NO	Category of the product.
products.price	Object	YES	
products.price.value	Number	YES	Global Price in USD Currency.
products.price.salePrice	Object	NO	If all keys are null, sale price is reset
products.price.salePrice.value	Number	NO	Global Sale Price in USD Currency.
products.price.salePrice.startAt	Date	NO	Global Sale Start date YYYY-MM-DD hh24:mm
products.price.salePrice.endAt	Date	NO	Global Sale End date YYYY-MM-DD hh24:mm
products.businessClients	Array	NO	List of Business Clients
products.businessClients.businessClientCode	String	NO	Code of Business Client
products.businessClients.price	Object	NO	
products.businessClients.price.value	Number	NO	Price in USD Currency
products.businessClients.price.salePrice	Object	NO	
products.businessClients.price.salePrice.value	Number	NO	Sale Price in USD Currency
products.businessClients.price.salePrice.startAt	Date	NO	Sale Start date YYYY-MM-DD hh24:mm
products.businessClients.price.salePrice.endAt	Date	NO	Sale End date YYYY-MM-DD hh24:mm

feedItems[].errors.businessClients[].messages	List	YES	Business Client code specific message
feedItems[].createdAt	Date	YES	Creation date
feedItems[].updatedAt	Date	YES	Last upated date

Response - Payload Example

Payload - example

```
{
  "feedSid": "fb53ce1d-6268-4f4f-948e-e880bcdeacea",
  "status": "COMPLETED",
  "feedType": "PRODUCT_UPDATE",
  "feedSource": "CSV",
  "total": 1,
  "completed": 1,
  "failed": 0,
  "createdBy": {
    "sid": "cef73249-0ee0-3c6e-943e-d896554e6242",
    "name": "Giane Fernandes",
    "email": "giane.fernandes@jumia.com"
  },
  "feedItems": [
    {
      "status": "COMPLETED",
      "productSid": "13192a6d-cd11-4a75-b944-ee7bbb530d86",
      "sellerSKU": "Firebolt-sku-10",
      "createdAt": "2020-11-03T11:23:13.406412Z",
      "updatedAt": "2020-11-03T11:23:15.723854Z"
    }
  ]
}
```

Note: The productSid will not be returned when the feed was a product creation.

To perform an update of newly created products, you need to get the products data at least once, from which you will get 2 valuable information for you to proceed, (1) the productSid needed for the update. (2) the qc status i.e if your product is compliant with our listing guideline and can be sold on the platform.

This gives you detail on the countries (businessClients) your product was created and if it was qc approved, you can only update the stock, price, status of products that have qc.status approved at least once. So alongside storing the productSid, you need to store the qc.status and only send the updates for those whose value is approved.

Important to create products aiming for a high content score: [check the guide](#)

POST - Products Create Feed - "/feeds/products/create"

Request a new Feed of Products creation.

Authentication: Web or Self Authorization Application managed on VC-UI

Limit of Records: We should start with a limit of 1000 records because of the payload Size.

Note: Please study the general content [guideline](#) before creating your products.

Attribute	Attribute Type	Required	Comments
-----------	----------------	----------	----------

shopId	UUID	YES	Shop Id. - Value: 07c390ae-d58a-42a2-8ec6-5051bca18cab									
products	Array	YES	List of Products to be created.									
products.name	Object	YES										
products.name.value	String	YES	Name of the product in default English language. For a better listing quality, the name should consist the actual product name, if available colour, edition, speciality. - Value: Wide Angle Camera 10 MP - Black, Galaxy Tab A Leather Flip Case - Red DO NOT ADD BRAND NAME HERE									
products.name.translations	Array	NO	List of translations for name.									
products.name.translations.language	String	NO	Translation language for name. - Value: FR to French or AR to Arabic									
products.name.translations.value	String	NO	Name of the product in the selected language. - Value in AR:									
products.description	Object	YES										
products.description.value	String	YES	Description of the product in default English language, it should give the customer useful information about the product to ensure a purchase. Paste http://bit.ly/3aazgoU into your browser for more information. - Value: JTC Full HD 24"" LED CD TV combines great features and design. It has a diagonal screen size 61 cm (24 inch), with integrated DVD player and a built-in tuner. It also receives satellite, cable, DVB-T and DVB-T2 signals without the need for a receiver.									
products.description.translations	Array	NO	List of translations for description.									
products.description.translations.language	String	NO	Translation language for the description. - Value: FR to French or AR to Arabic									
products.description.translations.value	String	NO	Description of the product in the selected language. - Value in FR: Test du nom du produit									
products.parentSku	String	YES	Parent SKU is used to group variations (e.g. different sizes) of a product together, fill this field with the SellerSKU of the first product. Products with the same parent SKU should pass the same set of product images. - Value: ABC-1000-202 Example on how to add a new variation: <table><thead><tr><th>Product</th><th>Request Payload</th><th>Description</th></tr></thead><tbody><tr><td>1st Product</td><td>"parentSku": "" new_product_sku_6 0077999" "sellerSku": "" new_product_sku_6 0077999" "variation": "1"</td><td>First variation will be the parent.</td></tr><tr><td>2nd Product</td><td>"parentSku": "" new_product_sku_6 0077999" "sellerSku": "" new_product_sku_6 0078000" "variation": "2"</td><td>On the next variation, the parent sku will be the one from first variation. The variation and the seller sku needs to be different.</td></tr></tbody></table>	Product	Request Payload	Description	1st Product	"parentSku": "" new_product_sku_6 0077999" "sellerSku": "" new_product_sku_6 0077999" "variation": "1"	First variation will be the parent.	2nd Product	"parentSku": "" new_product_sku_6 0077999" "sellerSku": "" new_product_sku_6 0078000" "variation": "2"	On the next variation, the parent sku will be the one from first variation. The variation and the seller sku needs to be different.
Product	Request Payload	Description										
1st Product	"parentSku": "" new_product_sku_6 0077999" "sellerSku": "" new_product_sku_6 0077999" "variation": "1"	First variation will be the parent.										
2nd Product	"parentSku": "" new_product_sku_6 0077999" "sellerSku": "" new_product_sku_6 0078000" "variation": "2"	On the next variation, the parent sku will be the one from first variation. The variation and the seller sku needs to be different.										

products.sellerSku	String	YES	Seller SKU is the identifier of the product, provided by the Seller. - Value: XMPL1
products.barcodeEan	String	NO	Barcode EAN of the product, provided by the Seller. - Value: 12345670000012356
products.variation	String	YES	Value that define the Product variation at the same Product Set. Each Attribute set can have only one simple attribute that is the variation. - Value: XL
products.brand	Object	YES	
products.brand.code	Number	YES	Brand of the product. If brand does not exist, please copy https://goo.gl/Hw8vma into your browser and fill accordingly. For unbranded Fashion items, please use code "1039426" and name "Fashion". Other unbranded items, please use code "1045133" and name "Generic". - Value: 1126299
products.brand.name	String	YES	The name of the brand. - Value: 16 Jeans
products.category	Object	YES	
products.category.code	Number	YES	The primary category determines that the right product attributes are set for the product. - Value: 1000001
products.category.name	String	YES	The name of the category. - Value: Books, Movies and Music
products.additionalCategories	Array	NO	Deprecated
products.additionalCategories.code	Number	NO	Depeccated
products.additionalCategories.name	String	NO	Deprecated
products.images	Array	YES	List of the Product images. At least one Primary image is required. Products with the same parent SKU should pass the same set of product images.
products.images.url	URL	YES	Image Public URL. - Value: https://ng.jumia.is/W-t47t1CIN1cl_y6KcnaM5Z-PjM=/fit-in/500x500/filters:fill(white)/product/90/278208/2.jpg?4790
products.images.primary	Boolean	YES	True if the primary, otherwise false. Only one image is allowed to be primary. - Value: true or false
products.price	Object	YES	
products.price.value	Number	YES	This is the price that the customer has to pay for the product in USD currency. This price includes taxes. - Value: 250.00
products.price.salePrice	Object	NO	If sale price value is present, then StartAt and EndAt are required.
products.price.salePrice.value	Number	NO	Sales Price for a Product in USD currency. - Value: 233.45
products.price.salePrice.startAt	Date	NO	Sales Price start date. Date format is YYYY-MM-DD hh24:mm. The first minute/second of the day in the Country local time zone. 00:00:00 - Value: 2022-04-29 09:38
products.price.salePrice.endAt	Date	NO	Sales Price end date. Date format YYYY-MM-DD hh24:mm. The last minute/second of the day in the Country local time zone. 23:59:59 - Value: 2022-05-15 18:38

products.stock	Number	YES	Enter the quantity/stock for the product. - Value: 50
products.attributes	Array	YES	It depends if attribute is required or not. Need to be checked for each attribute on attribute set entry point. Due to some legacy configuration, if name / description / variation (or an attribute marked with "variation": true) shows in an attribute set, it will be taken in with higher priority compared to the common attribute of the same name (name / description / variation) at product level. Please apply the same value for both.
products.attributes.name	String	YES	The name of the attribute. - Value: product_weight
products.attributes.value	String	YES	Attribute value. If type Text, should be in in the default English language. For other types like Number and boolean, also should be sent as String to preserve a generic JSON data type. e.g. "true", "123.44" - Value: 1kg
products.attributes.translations	Array	NO	List of translations for the attribute.
products.attributes.translations.language	String	NO	Translation language for the attribute. - Value: FR to French or AR to Arabic
products.attributes.translations.value	String	NO	Name of the attribute in the selected language. - Value in FR: Contenu de l'emballage Français

Success Response

HTTP Status Codes

Code	Response	Description
201	Created	The feed was successfully created

Success Response - Payload Content

Attribute	Attribute Type	Required	Comments
feedId	UUID	YES	The Feed Id.

Response - Payload Example

Payload - example
<pre>{ "feedId": "07c390ae-d58a-42a2-8ec6-5051bca19cab" }</pre>

POST - Create Consignment Order - "/consignment-order"

Request a new consignment order creation.

Authentication: Web or Self Authorization Application managed on VC-UI

Limit of Records: Max 2000 items per request

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id	NO	

Request - Payload

Attribute	Attribute Type	Required	Comments
shopId	UUID	YES	Shop ID

businessClientCode	String	YES	Client country code
shippingDate	Date	YES	Shipping date (format: yyyy-MM-dd hh:mm:ss)
comment	String	NO	Seller SKU.
products	Object	YES	List of products
products.sku	String	YES	Product sku identifier
products.quantity	Number	YES	Product quantity (min 1)
products.labelCode	String	NO	Product label code

Request - Payload Example

```
{
  "shopId": "3fa85f64-5717-4562-b3fc-2c963f66afa6",
  "businessClientCode": "jumia-ma",
  "shippingDate": "2022-03-25T10:09:00",
  "comment": "small comment",
  "products": [
    {
      "sku": "143354654",
      "quantity": 1,
      "labelCode": "product-a"
    }
  ]
}
```

Success Response

HTTP Status Codes

Code	Response	Description
201	CREATED	The consignment order was successfully created
400	BAD REQUEST	There was a problem with the request payload.
401	UNAUTHORIZED	The client could not be correctly authenticated.
422	UNPROCESSABLE ENTITY	Some data value is not correct

Success Response - Payload Content

Attribute	Attribute Type	Required	Comments
purchaseOrderNumber	String	YES	The purchase order number.

Response - Payload Example

```
{
  "purchaseOrderNumber": "123432as"
}
```

PATCH - Update Consignment Order - "/consignment-order/{purchaseOrderNumber}"

Updated consignment order with new information.

Authentication: Web or Self Authorization Application managed on VC-UI

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id	NO	

Request Parameters

Parameter Name	Parameter Type	Required	Accepted Values / Format	Multi Values	Comments
purchaseOrderNumber	String	YES	purchaseOrderNumber=123abc	NO	The purchase order number.

Request - Payload

Attribute	Attribute Type	Required	Comments
isShipped	Boolean	YES	Consignment order Is shipped status
trackingNumber	String	YES if isShipped is true, NO* otherwise	Delivery tracking number
actualDepartureDate	Date	NO	Delivery departure date
estimatedArrivalDate	Date	NO	Delivery estimated arrival date
deliveryAgentPhoneNumber	String	NO	Delivery Agent phone number
3plName	String	NO	Delivery Third-party logistics name

Request - Payload Example

```
{
  "isShipped": true,
  "trackingNumber": "string",
  "actualDepartureDate": "2022-02-01T17:51:03.413Z",
  "estimatedArrivalDate": "2022-02-01T17:51:03.413Z",
  "deliveryAgentPhoneNumber": "string",
  "3plName": "string"
}
```

Success Response

HTTP Status Codes

Code	Response	Description
200	OK	The consignment order was successfully updated

400	BAD REQUEST	There was a problem with the request payload.
401	UNAUTHORIZED	The client could not be correctly authenticated.
422	UNPROCESSABLE ENTITY	Some data value is not correct

GET - Retrieve Consignment Stock - "/consignment-stock"

Updated consignment order with new information.

Authentication: Web or Self Authorization Application managed on VC-UI

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id	NO	

Request Parameters

Attribute	Attribute Type	Required	Comments
businessClientCode	String	YES	Client country code
sku	String	YES	Product sku identifier

Success Response

HTTP Status Codes

Code	Response	Description
200	OK	The info was retrieved
400	BAD REQUEST	There was a problem with the request payload.
401	UNAUTHORIZED	The client could not be correctly authenticated.

Response - Payload

Attribute	Attribute Type	Comments
simpleSku	String	Product sku identifier
received	Number	Consignment orders received
quarantined	Number	Consignment orders quarantined
defective	Number	Consignment orders with faults
canceled	Number	Consignment orders canceled
returned	Number	Consignment orders returned
failed	Number	Consignment orders failed

Response - Payload Example

```
{
  "simpleSku": "string",
  "received": 0,
  "quarantined": 0,
  "defective": 0,
  "canceled": 0,
  "returned": 0,
  "failed": 0
}
```

GET - Get Stocks - "/catalog/stock"

Get Stock paginated.

Paginated: Yes, by "Next token" approach (same as GOP "Get Orders" API).

Request

Request Headers

Header Name	Header Type	Required	Accepted Values / Format	Multi Values	Comments
Authorization	Bearer Token	YES	JWT Token generated by Keycloak and Application Id	NO	

Query Parameters

Path Parameter Name	Parameter Type	Required	Accepted Values / Format	Default Values	Multi Values	Comments
token	String	NO			NO	
size	Long	NO	10	10	NO	The number of desired records between 1 and 100.
productSids	Array	NO				Product sids to filter in

Success Response

HTTP Status Codes

Code	Response	Description
200	OK	The request was successful.

Success Response - Payload Content

Attribute	Attribute Type	Required	Comments
products	Array	YES	List of products.
products.id	UUID	YES	Product Sid.
products.sellerSku	String	YES	Product Seller SKU.
products.globalStock	Integer	YES	Global stock for the product
products.lastStockUpdatedAt	Date	YES	Last update done by the seller to this product's stock

nextToken	String	NO	Pagination token.
isLastPage	Boolean	NO	Indicates if there are more pages to iterate

Success Response - Payload Example

Payload - example
